

Features:

- Universal AC input / Full range
- Auto switch when power off (UPS function)
- Built-in constant current limit circuit
- Alarm signal for AC OK and Battery low (TTL open collector output or relay contact output)
- Protection: SCP, OLP, OVP
 - Brown-out (Low AC Input Voltage)
 - Battery low protection
 - Battery polarity protection (by Resettable Fuses)
- Withstand 2G vibration test
- 3 years warranty

- Note**
1. All parameters NOT specially mentioned are measured at 230VAC input, rated load and 25°C of ambient temperature.
 2. Ripple & noise are measured at 20MHz of bandwidth by using a 12" twisted pair-wire terminated with a 0.1uF & 47uF parallel capacitor.
 3. Tolerance: includes set up tolerance, line regulation and load regulation.
 4. Line regulation is measured from low line to high line at rated load.
 5. Load regulation is measured from 10% to 100% rated load.
 6. The power supply is considered a component which will be installed into a final equipment. The final equipment must be re-confirmed that it still meets EMC directives.
 7. Length of set up time is measured at first cold start. Turning ON/OFF the power supply continuously may increase the set up time.
 8. The total power output must not exceed the rated power.
 9. CH2: Battery discharge current must not exceed 50% of the rated power.
 10. Do not connect the GND port with B- port in your application to prevent product damage.

Alarm Signal for AC OK and Battery Low

- (1) Alarm Signal is sent out through "AC OK" & "Battery Low" pins.
- (2) An external voltage source is required for this function. The maximum applied voltage is 50V and the maximum sink current is 30mA.
- (3) Table 3.1 explain the alarm function built-in the power supply.

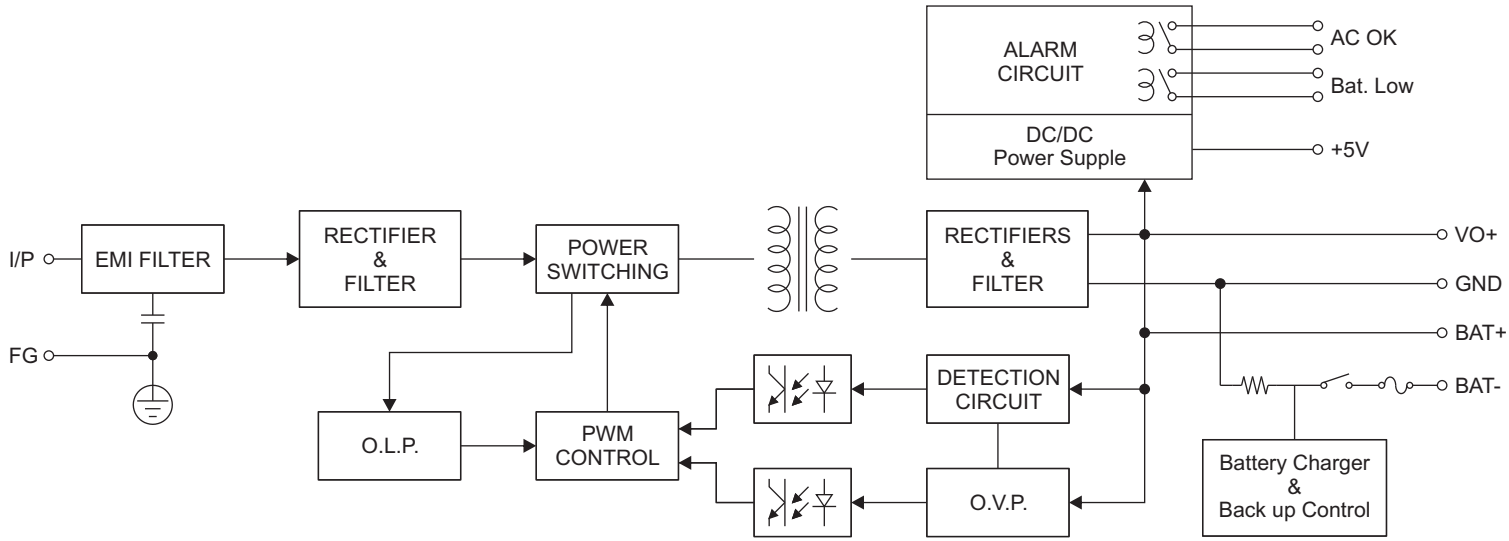

Function	Description	Output of alarm
AC OK	The signal is "Low" when the power supply turns on	Low (0.3V max. at 30mA)
	The signal turns to be "High" when the power supply turns OFF	High or open (External applied voltage 50V max.)
Battery Low	The signal is "Low" when the voltage of battery is under G:12V, L:22V	Low (0.3V max. at 30mA)
	The signal is "High" when the voltage of battery is above G:12V, L: 22V	High or open (External applied voltage 50V max.)

Alarm Signal for AC OK and Battery Low

- (1) Alarm Signal is sent out through "AC OK" & "Battery Low" pins. (relay contact type)
- (2) An external voltage source is required for this function. The maximum applied voltage is 30V and the maximum sink current is 1A.
- (3) Table 4.1 explain the alarm function built-in the power supply.

Function	Description	Output of alarm
AC OK	The signal is "Low" when the power supply turns on	Low or short
	The signal turns to be "High" when the power supply turns OFF	High or open (External applied voltage 30V max.)
Battery Low	The signal is "Low" when the voltage of battery is under GB:12V, LB:22V	Low or short
	The signal is "High" when the voltage of battery is above GB:12V, LB:22V	High or open (External applied voltage 30V max.)
